# Accenture Clone and Test

Copy, anonymize and compare with Accenture Clone and Test

Do you want to set up a realistic test or training system? Have loaded a support package from SAP and would like to be sure that your salary accounting is still running correctly? With Accenture Clone and Test, you can flexibly copy and compare data between different SAP HCM systems or different clients within the same system, or even within one client.

Your SAP HCM system is continually changing, whether through new releases, new functionalities or changed customer requirements. Upgrades, ongoing tests and user training are therefore part of everyday life with SAP. But what if you want to set up a realistic test or training system quickly and efficiently? How can you ensure that your salary accounting will run smoothly and without changes after an update? And how can you reproduce or duplicate "special cases" from production in the test system without major effort?

Accenture Clone and Test is the answer to these and other questions. The ability to copy, anonymize and compare data in a variety of application scenarios makes Accenture Clone and Test an indispensable tool in your everyday life with SAP HCM.

Create test records easily and safely

Accenture Clone and Test allows you to perform qualified "real-life" functional tests of new SAP HCM systems with ease. Just select and copy relevant test data from the current system into your test environment, perform your test runs there in a realistic environment, then compare the results with the original.

Highlights

- Copy any data selection from SAP HCM and Financials
- Maximum flexibility in the design of the test environment
- Simply structured user interface
- Highest standards of quality and service in terms of speed
- Usable in all countries where SAP ERP is available

Copying personnel data with Accenture Clone and Test

Accenture Clone and Test copies all data for one or more employees from one SAP HCM system or client to another. Infotypes to be copied can either be selected individually or copied as a whole – including customer-specific infotypes – without the need for customization. Cluster data, such as accounting and time-assessment results, can be copied, as can customer-specific tables.

Protect sensitive data according to your own rules

Accenture Clone and Test protects sensitive employee information by using rule-based anonymization mechanisms that can easilybe adapted to company-specific requirements. A few exemplary rules are sufficient to start with detailed and correct tests.

A complementary solution from the Accenture Clone and Test family

Patch analyser for the analysis and filtering of SAP HCM support packages
